Amazon.com: Climate Migration and Security: Securitisation ...

This sort of ' securitization ' of climate-induced migration obviously excludes those cases of transboundary displacement caused by other forms of environmental degradation. 7 This narrowness, however, is one strength of the book. It allows Boas to focus on and give due attention to her core research questions: Has climate migration been securitised?

Climate Migration and Security: Securitisation as a ...

Climate Migration and Security is the first book of its kind to examine the strategic usage of security arguments on climate migration as a political tool in climate change politics. Original theoretical, empirical, and policy-related insights will provide students, scholars, and policy makers with the necessary tools to review the effectiveness of these framing strategies for the purpose of climate change diplomacy and delve into the wider implications of these framing strategies for the ...

Climate Migration and Security | Securitisation as a ...

The consequences of the adoption of this extremely tight approach to migration from third countries, at both the EU and national level (Geddes 2003; Boswell and Geddes 2011), have been an increase in irregular migration and the progressive ' securitisation ' of migration. By ' securitisation ', the experts mean the development of migration into a ' security issue ', which has to be managed by security agencies such as, for example, Europol (Huymans 2000; Guiraudon 2018 [1]; 2000).

Securitisation of migration after the refugee crisis ...

Securitisation as a Strategy in Climate Change Politics ... DOI link for Climate Migration and Security. Climate Migration and Security book. Securitisation as a Strategy in Climate Change Politics. By Ingrid Boas. Edition 1st Edition . First Published 2015 . eBook Published 1 May 2015 . Pub. location New York .

Climate Migration and Security - Taylor & Francis

climate migration are increasingly perceived in terms of security through securitisation moves and securitisation acts. Securitisation moves illustrated by political discourse have perceived environmental challenges and climate migration as a threat to human, national, and collective security.

SECURITISING ENVIRONMENTAL CHALLENGES: THE CASE OF CLIMATE ...

By strengthening the climate security coalition, more pressure was put on those states still needing to make ambitious mitigation commitments during the UNFCCC negotiations on the post-Kyoto Framework. The primary countries the FCO targeted at that time were the US and the emerging developing countries (FCO, 2007: 71). But these emerging countries were precisely those overtly rejecting the security narrative on climate change, criticizing the move to discuss climate change in the Security ...

Securitization of climate change: How invoking global ...

Climate-induced migration bridges and knits together these discourses to provide a new, additional rationale for security officials and electorates anxious about immigration and the impact of climate change.

Securitization of Climate-Induced Migration - Oxford ...

Climate migration, as an image of people moving due to sea-level rise and increased drought, has been presented as one of the main security risks of global warming. The rationale is that climate...

Climate Migration and Security: Securitisation as a ...

As Michael Werz, a senior fellow for climate migration and security at the Center for American Progress, says, " There ' s a reason people demonstrated with baguettes in Cairo. "

How Russia Wins the Climate Crisis - The New York Times

Warning of migration on an unprecedented scale because of flooding, disease and famine, she said that climate change was a security issue, but it was not a matter of narrow national security...it was about " our collective security in a fragile and increasingly interdependent world ". 1 Secretary-General Ban Ki-moon said that projected climate changes could not only have serious environmental, social and economic implications, but implications for peace and security, as well.

Securitization and Chinese Climate Change Policy ...

For several years, receiving-country states have increasingly defined immigration as a security issue. This article reviews five recent books that analyse the securitisation of migration from different perspectives. The reviewed books address the securitisation of borders, refugees and their protection, and the consequences of securitisation for migrant minorities.

The securitisation of migration: Its limits and ...

Climate migration, as an image of people moving due to sea-level rise and increased drought, has been presented as one of the main security risks of global warming. The rationale is that climate change will cause mass movements of climate refugees, causing tensions and even violent conflict.

Climate Migration and Security | Bookshare

The Securitisation of Climate-Induced Migration: Critical Perspectives traditional and human security. For example, the humanitarian ' politics of pity ' in the field of human trafficking, which is advocated by many NGOs, is easily connectable to more traditional conceptions of security (Aradau 2004).

The Securitisation of Climate- Induced Migration: Critical ...

The current predictions of youth bubble and ensuing high-level poverty in sub-Saharan Africa, comprised with scenarios of climate changes driving mass cross-continental population movements show that mass migration can re-emerge as a future challenge to territorial, economic and societal security of better-off countries in their immediate or near-immediate neighborhood.

Migration and Security | Strategic Monitor 2018-2019

International migration has become a key security issue and is perceived, by some, as an existential security threat. The Securitization of Migration is about the movement of people and the system of order underpinning the movement. In undertaking a comparative study of Canada and France, the study analyzes the process of securitizing migration ...

Climate migration, as an image of people moving due to sea-level rise and increased drought, has been presented as one of the main security risks of global warming. The rationale is that climate change will cause mass movements of climate refugees, causing tensions and even violent conflict. Through the lens of climate change politics and securitisation theory, Ingrid Boas examines how and why climate migration has been presented in terms of security and reviews the political consequences of such framing exercises. This study is done through a macro-micro analysis and concentrates on the period of the early 2000s until the end of September 2014. The macro-level analysis provides an overview of the coalitions of states that favour or oppose security framings on climate migration. It shows how European states and the Small Island States have been key actors to present climate migration as a matter of security, while the emerging developing countries have actively opposed such a framing. The book argues that much of the division between these states alliances can be traced back to climate change politics. As a next step, the book delves into UK-India interactions to provide an in-depth analysis of these security framings and their connection with climate change politics. This micro-level analysis demonstrates how the UK has strategically used security framings on climate migration to persuade India to commit to binding targets to reduce their greenhouse gas emissions. The book examines how and why such a strategy has emerged, and most importantly, to what extent it has been successful. Climate Migration and Security is the first book of its kind to examine the strategic usage of security arguments on climate migration as a political tool in climate change politics. Original theoretical, empirical, and policy-related insights will provide students, scholars, and policy makers with the necessary tools to review the effectiveness of these framing strategies for the purpose of climate change diplomacy and delve into the wider implications of these framing strategies for the governance of climate change.

This Handbook provides a state-of-the-art analysis of the critically important links between migration and security in a globalising world, and presents original contributions suggesting innovative and emerging frontiers in the study of the securitization of migration. Experts from different fields reflect on their respective conceptualisations of the migration-security nexus, and consider how an interdisciplinary and multifaceted dialogue can stimulate and enrich our understanding of the securitisation of migration in the contemporary world.

Master's Thesis from the year 2011 in the subject Earth Science / Geography - Geopolitics, Panjab University, language: English, abstract: Human beings have always migrated in search of better opportunities and better life. Migrations are also well tested strategies followed by various communities to adapt to various calamities and disasters. Most of civilizations (e.g. ancient Egyptian and Indus Valley civilizations) have come up as a result of people migrating to river valleys. It was only with the emergence of modern nation-states system, particularly after the treaty of Westphalia, that new notion of legality and illegality got attached to the process of migration, boundaries became rigid and exclusive, and the flows of people became an issue of ' Others ' and ' Othering '. In short, the history of mobility is much longer than the history of Westphalian territoriality and borders. In the present era climate change is becoming the defining factor in human migration. The current dominant geopolitical narratives and framings of climate change tend to focus on the impacts of climate change on potential drivers of conflict, such as population movements, border disputes, and access to food, water, energy and other scarce resources. It is against the backdrop of a whirlpool of highly imaginative and alarmist geographies of a ' catastrophic ' climate change that a new and highly contested concept of ' climate refugee ' has emerged. Those who are forced to leave their native land by the ' global ' climate change are now described as climate migrants for want of a better term. Millions of people around the globe are said to be at risk of displacement due to climate change; being forced to leave their homelands temporarily or permanently. It is believed that nine out of every ten disasters are somehow related to climate change. It has become an accepted fact among the international community that climate change is going to result in large number of displacement. The Inter Governmental Panel on Climate Change (IPCC) has minced no words in warning that " The impacts of climate change on Asia will place additional stress on socioeconomic and physical systems... A further demographic response will come about through the risk of extreme events on human settlements. If the incidence and magnitudes of events such as droughts and coastal floods increase, there could be large-scale demographic responses—for example, through migration " (IPCC, Working Group 2, 2007).

Immigration today evokes passionate debates over questions of national identity, state sovereignty, and citizenship. Even as capital, goods, and services flow easily over national boundaries, human beings are subjected to intense scrutiny and resistance when crossing borders. In this collection of essays, distinguished scholars probe the challenges and opportunities that global migration presents for individuals, states, and societies grappling with questions of identity, belonging, and citizenship. Multidisciplinary in scope, the book demonstrates how forced and voluntary migrations intersect with global politics, from economic and environmental crises to human rights and security.

Severe droughts, damaging floods and mass migration: Climate change is becoming a focal point for security and conflict research and a challenge for the world ' s governance structures. But how severe are the security risks and conflict potentials of climate change? Could global warming trigger a sequence of events leading to economic decline, social unrest and political instability? What are the causal relationships between resource scarcity and violent conflict? This book brings together international experts to explore these questions using in-depth case studies from around the world. Furthermore, the authors discuss strategies, institutions and cooperative approaches to stabilize the climate-society interaction.

Examines how climate-induced migration, the relocation of individuals from harsh climate areas to more favorable ones, has led to concerns about national borders, sovereignty, and security, along with suggestions to combat the situation.

Climate migration, as an image of people moving due to sea-level rise and increased drought, has been presented as one of the main security risks of global warming. The rationale is that climate change will cause mass movements of climate refugees, causing tensions and even violent conflict. Through the lens of climate change politics and securitisation theory, Ingrid Boas examines how and why climate migration has been presented in terms of security and reviews the political consequences of such framing exercises. This study is done through a macro-micro analysis and concentrates on the period of the early 2000s until the end of September 2014. The macro-level analysis provides an overview of the coalitions of states that favour or oppose security framings on climate migration. It shows how European states and the Small Island States have been key actors to present climate migration as a matter of security, while the emerging developing countries have actively opposed such a framing. The book argues that much of the division between these states alliances can be traced back to climate change politics. As a next step, the book delves into UK-India interactions to provide an in-depth analysis of these security framings and their connection with climate change politics. This micro-level analysis demonstrates how the UK has strategically used security framings on climate migration to persuade India to commit to binding targets to reduce their greenhouse gas emissions. The book examines how and why such a strategy has emerged, and most importantly, to what extent it has been successful. Climate Migration and Security is the first book of its kind to examine the strategic usage of security arguments on climate migration as a political tool in climate change politics. Original theoretical, empirical, and policy-related insights will provide students, scholars, and policy makers with the necessary tools to review the effectiveness of these framing strategies for the purpose of climate change diplomacy and delve into the wider implications of these framing strategies for the governance of climate change.

This book provides the first systematic comparative analysis of climate security discourses. It analyses the securitisation of climate change in four different countries: USA, Germany, Turkey, and Mexico. The empirical analysis traces how specific climate-security discourses have become dominant, which actors have driven this process, what political consequences this has had and what role the broader context has played in enabling these specific securitisations. In doing so, the book outlines a new and systematic theoretical framework that distinguishes between different referent objects of securitisation (territorial, individual and planetary) and between a security and risk dimension. It thereby clarifies the ever-increasing literature on different forms of securitisation and the relationship between security, risk and politics. Whereas securitisation studies have traditionally focused on either a single country case study or a global overview, consequently failing to reconstruct detailed securitisation dynamics, this is the first book to provide a systematic comparative analysis of climate security discourses in four countries and thus closes an empirical gap in the present literature. In addition, this comparative framework allows the drawing of conclusions about the conditions for and consequences of successful securitisation based on empirical and comparative analysis rather than theoretical debate only. This book will of interest to students of climate change, environmental studies, critical security, global governance, and IR in general.

Collective Securitisation and Security Governance in the European Union presents an integrated theory of collective securitisation – a theoretical foundation for explaining how the process of collective securitisation sustains and makes effective an identifiable system of regional security governance. The volume demonstrates the empirical utility of collective securitisation in the EU security space through a set of structured case studies focusing on the collective securitisation of terrorism, cyberspace, migration, energy, health and climate change. The contributions to this collection address three questions: Under what conditions does collective securitisation occur? How does collective securitisation affect the scope and domains of EU security governance? And how does collective securitisation explain the emergence of the EU system of security governance? This volume breaks new ground in the field of EU security studies and provides a theoretical orientation that contributes to our understanding of how and why the EU has developed as a security actor in the 21st century. Developing and testing the theory of collective securitisation with reference to some of the most pressing contemporary security issues, Collective Securitisation and Security Governance in the European Union will be of great interest to scholars of the European Union and Security Studies. The chapters were originally published as a special issue of West European Politics.

This book provides an in-depth analysis of the securitisation of climate change in the US, Germany and Mexico and offers a rethinking of securitisation theory. Resting on a Foucauldian governmentality approach, it discusses how different climate security discourses have transformed the political handling of climate change and affected policies, practices and institutions. Going beyond the literature ' s predominant focus on the global level, it gives a fine-grained examination of the political and institutional changes in different national contexts. Drawing on the governmentalisation of security, the book develops a new understanding of securitisation that focuses on the role of power. In doing so, it provides new insights into the transformative potential of linking climate change to security but also highlights the political and normative pitfalls of securitisation. " In this important book, Franziskus von Lucke provides a theoretically sophisticated and empirically rich account of the relationship between security and climate change. Developing a Foucauldian-inspired account of securitization, the book rejects blanket or universal claims about the climate change- security relationship, instead insisting on the need to critically examine how the securitization of climate change plays out in particular empirical contexts. Exploring the cases of the US, Germany and Mexico, von Lucke points to distinctive dynamics of securitization in these settings, with different implications for the practices these in turn encourage. Ultimately, this book constitutes an important addition to literature on the relationship between climate change and security, while developing a distinct and nuanced account of securitization that will be of interest to a wide range of scholars of security in international relations. " —Associate Professor Matt McDonald is a Reader in International Relations at the University of Queensland, Australia " In 2019 a number of states and other actors (notably the European Union) have made climate emergency declarations. It is therefore more important than ever to understand what the securitization of the climate means. That is: Who can securitize? What security measures are likely/ deemed legitimate by relevant audiences? How does securitization affect the population within and outside a securitizing state? And perhaps most importantly of all, will it succeed? Franziskus von Lucke ' s carefully researched book offers answers to all of these questions and many others besides. von Lucke proceeds by examining with the US, Mexico and Germany, three real-life empirical cases of climate securitization. Each one provides unique insights that enable a fuller understanding of climate security. Accessibly written this is a must read for scholars and practitioners alike. " —Dr Rita Floyd, University of Birmingham, UK, author of The Morality of Security: A theory of just Securitization, CUP, 2019 With great empirical detail and conceptual clarity, the book compares discourses and practices of climate security in different contexts. An essential reading for anyone interested in enabling a fuller understanding of politics, securitization theory, governmentality and the notion of power in International Relations. —Dr Delf Rotte, Institute for Peace Research and Security Policy Hamburg at the University of Hamburg, Germany
