First edition: Winner of Choice Magazine - Outstanding Academic Titles for 2007 Sustainability promises both reduced environmental impacts and real cash savings for any organization - be it a business, non-profit/NGO or government department. This easy-to-use manual has been written by top business consultants specifically to help managers, business owners, organizational leaders and aspiring environmental managers/sustainability coordinators to improve their organization's environmental, social and economic performance. The authors demystify 'sustainability', untangle the plethora of sustainability frameworks, tools and practices, and make it easy for the average person in any organization to move towards sustainability. Organized by sector (manufacturing, services and office operations, and government) and common organizational functions (senior management, facilities, human resources, purchasing, environmental affairs and compliance, marketing and public relations, and finance and accounting), the authors show how organizations can incorporate sustainability into their everyday work through the application of useful tools and self-assessments. This fully updated edition includes a new chapter on information and communication technology (ICT). The authors have also added many new facts, stories, practices and resources throughout the book to keep up

with this rapidly emerging field and have updated their widely used SCORE sustainability assessment.

What is economics? What can - and can't - it explain about the world? Why does it matter? Ha-Joon Chang teaches economics at Cambridge University, and writes a column for the Guardian. The Observer called his book *23 Things They Don't Tell You About Capitalism*, which was a no.1 bestseller, 'a witty and timely debunking of some of the biggest myths surrounding the global economy.' He won the Wassily Leontief Prize for advancing the frontiers of economic thought, and is a vocal critic of the failures of our current economic system.

The first International Conference on Energy Efficiency in Household Appliances was held in Florence, Italy, in November 1997. This book provides a full account of presentations made, discussions and conclusions reached during the four days of the Conference. It offers a comprehensive picture of the issues at stake, of the results achieved so far through the design and application of standards, the promotion of a better consumer information, the development of energy efficient products and technologies as well as of test methods and other analytical tools.

Voluntary environmental agreements (VEAs) - generally agreements between government and business - have been regarded by many as a key new instrument for meeting environmental objectives in a flexible manner. Their performance to date has, however, also led to considerable criticism, with several parties arguing that they are methods for avoiding real action that goes beyond "business-as-usual". Is either of these positions justified? The aim of this book is to highlight and learn the lessons from existing experience, looking not just at results but also at specific elements of agreements and also at the process of the agreement itself. Lessons are drawn from experience from across the world, covering the full range of environmental challenges, and from the perspective of key stakeholder groups. Importantly, the book also presents tools for assessing and improving existing agreements and includes recommendations and guidelines for future agreements in key areas such as climate change. It also deals at length with the problem of how such agreements might be used in developing and transitional economies. The overall view of the book is that there is a real potential for the future use of VEAs as part of the policy mix and as a tool for sharing the responsibility for meeting environmental objectives. For the agreements to play this role, however, significant steps are needed to ensure that they are effective, efficient, equitable and appropriately linked to a portfolio of other instruments. The book is divided into four sections. First, existing agreements, their development and efficacy are considered; second, the prospects for voluntary agreements in developing and transitional economies are discussed; third, a range of

authors examine the role of VEAs as part of the policy mix to combat climate change; and, finally, the book concludes with an examination of how new tools for evaluating and improving VEAs could be utilized in the future. Voluntary Environmental Agreements will be of interest not only to academics, governments and businesses wishing to understand this specific instrument, but also to those already implementing or considering applying VEAs to meet their environmental objectives.

This book is primarily intended to serve as a research-based textbook on sustainable supply chains for graduate programs in Business, Management, Industrial Engineering, and Industrial Ecology, but it should also be of interest for researchers in the broader sustainable supply chain space, whether from the operations management and industrial engineering side or more from the industrial ecology and life-cycle assessment side. Finding efficient solutions towards a more sustainable supply chain is increasingly important for managers, but clearly this raise difficult questions, often without clear answers. This book aims to provide insights into these kinds of questions for students and practitioners, based on the latest academic research.

Energy efficiency of appliances: hearing before the Committee on Energy and Natural Resources, United States Senate, One Hundred Eleventh Congress, second session, on S. 1696, S. 2908, S. 3054, S. 3059, March 10, 2010.

Based on a wealth of empirical studies and case studies, this book explains the strategic choices companies have to make in order to remain consistent. In each chapter, real-life examples illuminate the key message managers should take away from the book. It offers a purely managerial viewpoint focused on what managers can do to manage the business environment in any situation.
