Fields and Waves in Communication Electronics by John R

As previously reported by the author at the 47th Annual GEC in paper AA-5 (1994) voltage and current standing waves have been observed along two- and four-turn inductive coils operated at 13.56 MHz. Inductive rf power was used to generate a CHF 3 plasma at 4 mTorr. Data from voltage and current probes installed on each end of the coil were used to derive spatial variations of V and I by using ...
