A dizzying trip through the mind(s) of the provocative and influential thinker Nick Land. During the 1990s British philosopher Nick Land's unique work, variously described as "rabid nihilism," "mad black

deleuzianism," and "cybergothic," developed perhaps the only rigorous and culturally-engaged escape route out of the malaise of "continental philosophy" —a route that was implacably blocked by the academy. However, Land's work has continued to exert an influence, both through the British "speculative realist" philosophers who studied with him, and through the many cultural producers—writers, artists, musicians, filmmakers—who have been invigorated by his uncompromising and abrasive philosophical vision. Beginning with Land's early radical rereadings of Heidegger,

Nietzsche, Kant and Bataille, the volume collects together the papers, talks and articles of the mid-90s—long the subject of rumour and vague legend (including some work which has never previously appeared in print)—in which Land developed his futuristic theory-fiction of cybercapitalism gone amok; and ends with his enigmatic later writings in which Ballardian fictions, poetics, cryptography, anthropology, grammatology and the occult are smeared into unrecognisable hybrids. Fanged Noumena gives a dizzying perspective on the entire trajectory of this provocative and influential thinker's work,

In *Religious Affects* Donovan O. Schaefer challenges the notion that religion is inextricably linked to language and belief, proposing instead that it is primarily driven by affects. Drawing on affect theory, evolutionary biology, and poststructuralist theory, Schaefer builds on the recent materialist shift in religious studies to relocate religious practices in the affective realm—an insight that helps us better understand how religion is lived in

conjunction with systems of power. To demonstrate religion's animality and how it works affectively, Schaefer turns to a series of case studies, including the documentary Jesus Camp and contemporary American Islamophobia. Placing affect theory in conversation with post-Darwinian evolutionary theory, Schaefer explores the extent to which nonhuman animals have the capacity to practice religion, linking human forms of religion and power through a new analysis of the chimpanzee waterfall dance as observed by Jane Goodall. In this compelling case for the use of affect theory in religious studies,

Every year the few hundred members of the Committees, Task Forces, and Councils of the American Psychiatric Association meet in Washington, D.C. to conduct their business. They deliberate on a wide variety of issues

encompassed in the activities of each group. The psychiatrists constituting this mixed and somewhat elite group include some of the better-known and promising people in the profession, which makes the plenary session and cocktail party good occasions to meet old friends and to make new ones. Several years ago one of us (N.B.L.) attended this gathering as a member of a soon-to-be defunct group, the Committee Liaison with the American College of Physicians, and met Ann Chappell, a member of the Task Force on Women. We were soon joined by Richard Grant. Ann impressed us with the work her group was

doing on issues surrounding the Women's Movement as it relates to patients and the changing roles of the early 1970s. She was struck by the fact that although some women had been very active in this endeavor, nobody in American psychiatry was addressing issues which are arising in men as a result of the changing roles of women in society. Dick and Norm were moved by what she said and decided that they would make an effort to gather together people interested in the issue of the changing roles of males in society at the oncoming meeting of the American Psychiatric Association.

As Michel Foucault says in his Preface it is an 'Introduction to Non-Fascist Living'.
Preface by Michel Foucault. Translated by Robert Hurley, Mark Seem, and Helen R. Lane

The various Indo-European branches had a shared linguistic and cultural origin in prehistory, and this book sets out to overcome the difficulties about understanding the gods who were inherited by the later literate cultures from this early "silent" period by modelling the kind of society where the gods could have come into existence. It presents the theory that there were ten gods,

who are conceived of as reflecting the actual human organization of the originating time. There are clues in the surviving written records which reveal a society that had its basis in the three concepts of the sacred, physical force, and fertility (as argued earlier by the French scholar, Georges Dumézil). These concepts are now seen as corresponding to the old men, young men, and mature men of an age-grade system, and each of the three concepts and life stages is seen to relate to an old and a young god. In addition to these six gods, and to two kings who relate in positive and negative ways to

the totality, there is a primal goddess who has a daughter as well as sons. The gods, like the humans of the posited prehistoric society, are seen as forming a four-generation set originating in an ancestress, and the theogony is explored through stories found in the Germanic, Celtic, Indian, and Greek contexts. The sources are often familiar ones, such as the Edda, the Mabinogi, Hesiod's Theogony, and the R?m?ya?a, but selected components are looked at from a fresh angle and, taken together with less familiar and sometimes fragmentary materials, yield fresh perspectives which

allow us to place the Indo-European cosmology as one of the world's indigenous religions. We can also gain a much livelier sense of the original culture of Europe before it was overlaid by influences from the Near East in the period of literacy. The gods themselves continue to exert their fascination, and are shown to reflect a balance between the genders, between the living and the ancestors, and between peaceful and warlike aspects expressed at the human level in alternate succession to the kingship.
