audio book: listen to the story as you read.
Written for Learners of English by
Barnaby Newbolt. Thousands of years
ago, people looked out across an ocean
and asked themselves, 'What is on the
other side?' And the bravest of them began
to travel and find the answers - beautiful
islands, frozen lands, different peoples . . .
And there are still interesting questions
about the oceans. How do they change our
weather? Why does the water go up and

down twice a day? Why do most animals and plants live near the land? And what can possibly live at the bottom of the ocean, thousands of metres down, where there is no light? Surely nothing can stay alive in a place like that . . .

The 47 essays in this volume, composed by historians and theologians from 15 nations, survey the background, context, content and impact of the thinking of Martin Luther. These authors explore the

intellectual traditions which formed his thought, his hermeneutical framework, his teaching on specific topics of biblical doctrine, his social and ethical positions, the ways in which specific genre and interaction with others (both supporters and opponents) formed his theology, and its impact on subsequent centuries and several parts of the twenty-first world. Essays explore the dimensions and implications of Luther's way of thought within its historical context on the basis of original sources and debates among interpreters of his thinking and his influence on later generations.

Suitable for younger learners

In the past decade, the field of comparative cognition has grown and thrived. No less rigorous than purely behavioristic investigations, examinations of animal intelligence are useful for scientists and psychologists alike in their quest to understand the nature and mechanisms of intelligence. Extensive field research of various species has yielded exciting new areas of research, integrating findings from psychology, behavioral ecology, and ethology in a unique and wide-ranging synthesis of

theory and research on animal cognition. The Oxford Handbook of Comparative Cognition contains sections on perception and illusion, attention and search, memory processes, spatial cognition, conceptualization and categorization, problem solving and behavioral flexibility, and social cognition processes including findings in primate tool usage, pattern learning, and counting. The authors have incorporated findings and theoretical approaches that reflect the current state of the field. This comprehensive volume will be a must-read for students and scientists who want to know about the state of the art of the modern science of comparative cognition.
