The distinctive group of forty colleges profiled here is a well-kept secret in a status industry. They outdo the Ivies and research universities in producing winners. And they work their magic on the B and C students as well as on the A students. Loren Pope, director of the College Placement Bureau, provides essential information on schools that he has chosen for their proven ability to develop potential, values, initiative, and risk-taking in a wide range of students. Inside you'll find evaluations of each school's program and personality to help you decide if it's a community that's right for you; interviews with students that offer an insider's perspective on each college; professors' and deans' viewpoints on their school, their students, and their mission; and information on what happens to the graduates and what they think of their college experience. Loren Pope encourages you to be a hard-nosed consumer when visiting a college, advises how to evaluate a school in terms of your own needs and strengths, and shows how the college experience can enrich the rest of your life.

The ability to conceptualize an economic problem verbally, to formulate it as a mathematical model, and then represent the mathematics in software so that the model can be solved on a computer is a crucial skill for economists. Computational Economics contains well-known models--and some brand-new ones--designed to help students move from verbal to mathematical to computational representations in economic modeling. The authors' focus, however, is not just on solving the models, but also on developing the ability to modify them to reflect one's interest and point of view. The result is a book that enables students to be creative in developing models that are relevant to the economic problems of their times. Unlike other computational economics textbooks, this book is organized around economic topics, among them macroeconomics, microeconomics, and finance. The authors employ various software systems--including MATLAB, Mathematica, GAMS, the nonlinear programming solver in Excel, and the database systems in Access--to enable students to use the most advantageous system. The book progresses from relatively simple models to more complex ones, and includes appendices on the ins and outs of running each program. The book is intended for use by advanced undergraduates and professional economists and even, as a first exposure to computational economics, by graduate students. Organized by economic topics Progresses from simple to more complex models Includes instructions on numerous software systems Encourages customization and creativity

How to educate the next generation of college students to invent, to create, and to discover--filling needs that even the most sophisticated robot cannot. Driverless cars are hitting the road, powered by artificial intelligence. Robots can climb stairs, open doors, win Jeopardy, analyze stocks, work in factories, find parking spaces, advise oncologists. In the past, automation was considered a threat to low-skilled labor. Now, many high-skilled functions, including interpreting medical images, doing legal research, and analyzing data, are within the skill sets of machines. How can higher education prepare students for their professional lives when professions themselves are disappearing? In Robot-Proof, Northeastern University president Joseph Aoun proposes a way to educate the next generation of college students to invent, to create, and to discover--to fill needs in society that even the most sophisticated artificial intelligence agent cannot. A "robot-proof" education, Aoun argues, is not concerned solely with topping up students' minds with high-octane facts. Rather, it calibrates them with a creative mindset and the mental elasticity to invent, discover, or create something valuable to society--a scientific proof, a hip-hop recording, a web comic, a cure for cancer. Aoun lays out the framework for a new discipline, humanics, which builds on our innate strengths and prepares students to compete in a labor market in which smart machines work alongside human professionals. The new literacies of Aoun's humanics are data literacy, technological literacy, and human literacy. Students will need data literacy to manage the flow of big data, and technological literacy to know how their machines work, but human literacy--the humanities, communication, and design--to function as a human being. Life-long learning opportunities will support their ability to adapt to change. The only certainty about the future is change. Higher education based on the new literacies of humanics can equip students for living and working through change.

How the SEC Became Goliath covers the Southeastern Conference and how the league became dominant in college football, winning six straight national championships. Size matters. That's why the SEC is Goliath, because the Southeastern Conference, top to bottom, has better coaches, better stadiums, better bank accounts, and better weather, but the real difference maker is the bigger and better players. For six straight years the SEC has walked off with the big crystal prize and will not give it back. The talk of "big boy football" grinds on the Buckeyes, Sooners, Longhorns, and Ducks. All they can come back with is "Wait until next year." Then next year comes and the SEC tribe is chanting in the closing minutes of the National Championship Game, "SEC, SEC, SEC!" The national championship trophy has been in the South for so long it has sunburn. That is why college football is thick with the acronym: SEC vs. Everyone Else. The dominance of the SEC has a lot more to do with the South's culture than just the rock-'em, sock-'em of football played one day a week. The South lost the Civil War, and sociologists will tell you that there is still a regional angst, an "us against them" mentality, a spirit of "those damn Yankees." It is not just about championships. The SEC is about culture and competitiveness. . . . It is about players. \*\*\* How the SEC Became Goliath provides an inside look at college football's most dominant conference. Four different schools in the SEC have won the last six championship titles: Florida vs. Ohio State in 2006 January 8, 2007 • The Zook-Meyer Gators embarrass the Big Ten. Florida 41 Ohio State 14 LSU vs. Ohio State in 2007 January 7, 2008 • Unbeaten in regulation, the Tigers are good . . . and lucky. LSU 38 Ohio State 24 Florida vs. Oklahoma in 2008 January 8, 2009 • One of the best teams in history, these Gators are all Meyer's. Florida 24 Oklahoma 14 Alabama vs. Texas in 2009 January 7, 2010 • The Tide make it four in a row for the SEC. Alabama 37 Texas 21 Auburn vs. Oregon in 2010 January 10, 2011 • Cam Newton and Auburn cap a perfect season. Auburn 22 Oregon 19 Alabama vs. LSU in 2011 January 9, 2012 • Saban wins his third title and the SEC makes it six in a row. Alabama 21 LSU 0

This volume provides an in-depth examination of six political campaigns waged during competitive 1998 races for the U.S. House of Representatives. The case studies evaluate the professional political consultants who managed each campaign, their interaction with the candidates, and the impact of the campaigns on voters. Relying on unparalleled access to both the consultants involved and the candidates themselves, the contributors explore the electoral setting and context of the congressional districts, the strategy, theme, and message of each campaign, the consultants' decisionmaking, fund-raising, and spending, and any outside forces that entered into the races. The book features new data on tracking, polls, and television advertising budgets.
